FILIPE DA SILVA SANTOS

OBJECTIVE

Laravel Back-end development

ABOUT

I started programming in college, in the Computer Science course. In the same year, I had my first internship opportunity in the field at a small company called TJC, responsible for e-commerce at LOGnature https://www.lognature.com.br. At this stage, I took my first steps in **PHP**, I learned to do a **CRUD** and to work with the **CakePHP** framework, I was also able to learn the basic concepts of **SQL**, **HTML and CSS.**
In my second internship opportunity, at Banco do Brasil, I was also focused on **PHP**. There I developed an internal blog, a medical schedule for employees, a search engine and contract generator and a program that read and registered barcodes, with which it was possible to streamline the inventory of equipment and furniture in the sector.
My next work journey was at Ink Co., where I developed landing pages and blogs using **PHP, HTML and CSS.**
Afterwards, I had a work experience at the company Empresta Bem Melhor, where I was part of the e-commerce team, focused on selling withdrawals from the Brazilian guarantee fund for length of service. In this e-commerce, I used the **Laravel** stack, **VueJS and MySQL**. In addition to the e-commerce, I developed the Empresta blog in **Laravel and VueJS** and an affiliate system using the Ecommerce API where I gave the opportunity to other businesses to offer the brazilian guarantee fund as a payment method to the customer.
In my most recent role, I performed maintenance and refactoring on an API to track employee time in **Laravel**, at the company Mensis.
